

## Extensive New L1 Fire Alarm System

**Category of job:**  
Fire Alarm

**Location:**  
Swindon

An ongoing and complex L1 fire alarm system for this Swindon based client.

We were commissioned to design and install an L1 system to provide the required protection throughout the various areas of the site. The usage of the different areas varied enormously. Many areas are regular office spaces, there is flammable storage onsite. The production processes which are located in multiple areas of the site create challenges in terms of fire detection. Some processes generate very high temperatures. Other processes create smoke.

Incorporating the very latest technology and exceptional products we designed a system that met all of the clients' needs.

*Working with our client and the local fire brigade our complex design was approved*
