

57 New Build Retirement Apartments

Category of job: Domestic New Build

Here at Abbey, we work very closely with a well-known provider of new build retirement homes. On this occasion we designed and installed the electrical services for 57 bespoke apartments. These apartments have been designed to be user friendly with a fan boost system throughout each plot, high end white goods and modern energy efficient storage heaters. We also provided electrical services to the Bistro Wellness Suite and a full Commercial on-site kitchen that provide residents with living areas that could enhance their experience while in the property.

At later stages we provided full complete sales suites for the end user sales team. This enabled site visitors to visit the property and view the communal areas, prior to purchasing a property in the building.

Upon completion we provided a full operations and maintenance pack for the client with full designs for all plots and communal areas and data sheets for all equipment provided alongside training for the new staff and residents to enable a smooth transition into the property.

- Electrical Design, Inception to Completion.
- Installation of Communal Areas including Bistro, Residents Lounge and Commercial Kitchen.
- Installation of 57 Bespoke Apartments.
- Full CAD Layout Drawings.
- Electrical Certification to 18th Edition.
